Long-lasting products from recycled plastic

Posts

The benefits of Ekol

- does not decay, acid and salt-resistant
- resistant against microbial action
- durable
- very weather resistant
- maintenance-free
- very user-friendly
- 100 % recyclable

Variations in dimensions (up to 3%) and color can occur in recycled plastic products.

User-friendly

The posts are low maintenance and do not require treatment with environmentally hazardous products.

The thickness of the materials provides intrinsic strength and rigidity. The specific properties of the plastics used result in very high weather resistance.

The materials are also free of splinters and durable.

Environmentally safe

All the materials are completely made out of recycled plastic waste, without using any raw materials.

The concept of our products makes reinforcing the materials with metal or fibreglass redundant. These additions would make recycling later on impossible.

The application of BAT (Best Available Technology) results in a sustained production process as well as in long-lasting products. All EKOL-products can be recycled again in our installations into new products: full circle, perfect recycling.

Quality

EKOL guarantees the highest quality and ensures delivery of all products in perfect condition to the customers.

In short: EKOL guarantees eco-quality.
